

Timed Ping Windows - Linux

So the two commands are different but same concept, usually used to run a command after something has finished.

Linux: (5 = 5 seconds)

```
ping -w 5 localhost
```

Note: For Linux you can use:

```
sleep .5 # Waits 0.5 second.  
sleep 5 # Waits 5 seconds.  
sleep 5s # Waits 5 seconds.  
sleep 5m # Waits 5 minutes.  
sleep 5h # Waits 5 hours.  
sleep 5d # Waits 5 days.
```

Windows: (5 = 5 seconds)

```
ping localhost -n 5
```
