

Convert VMDK or OVA to VHD

1. [Install VirtualBox](#)
2. Use [7Zip](#) to extract OVA (Contains VMDK and OVA file)
3. Run CMD.EXE as Admin

```
cd %programfiles%\Oracle\VirtualBox  
  
vboxmanage clonehd "C:\tmp\GNS3 IOU VM-disk1.vmdk" "C:\tmp\GNS3 IOU VM-disk1.vhd" -format VHD
```

Note: I had no problem installing VirtualBox after Hyper-V was up and running, didn't try to actually RUN anything, just needed the cmd vboxmanage to work!
