

WinPE WaikTroubles

In CMD enter:

```
sc.exe query wimfltr
```

```
If status = 4 = Running
```

Reboot and check again should be

```
1 = Stopped
```

Problem Solved

I believe this is related to building a Win7PE then trying to build a Win8+PE due to different mounting of the WIM methods used. I could be wrong though, that it just a guess based on when I encountered the error.
