

Disable SELinux - CentOS

Disable :

```
sed -i 's/\(^SELINUX=\).*\/\SELINUX=disabled/' /etc/selinux/config && reboot
```

Check:

```
[root@localhost]# sestatus  
SELinux status:                disabled
```

Issues:

If you used the following config file (/etc/sysconfig/selinux) to change the status, like you should, and it doesn't work, it means that the main file didn't get changed. The file most people say to edit is really a symlink to this file /etc/selinux/config
